

Measles is Back: A Data-Driven Look at Vaccination Gaps in the U.S.

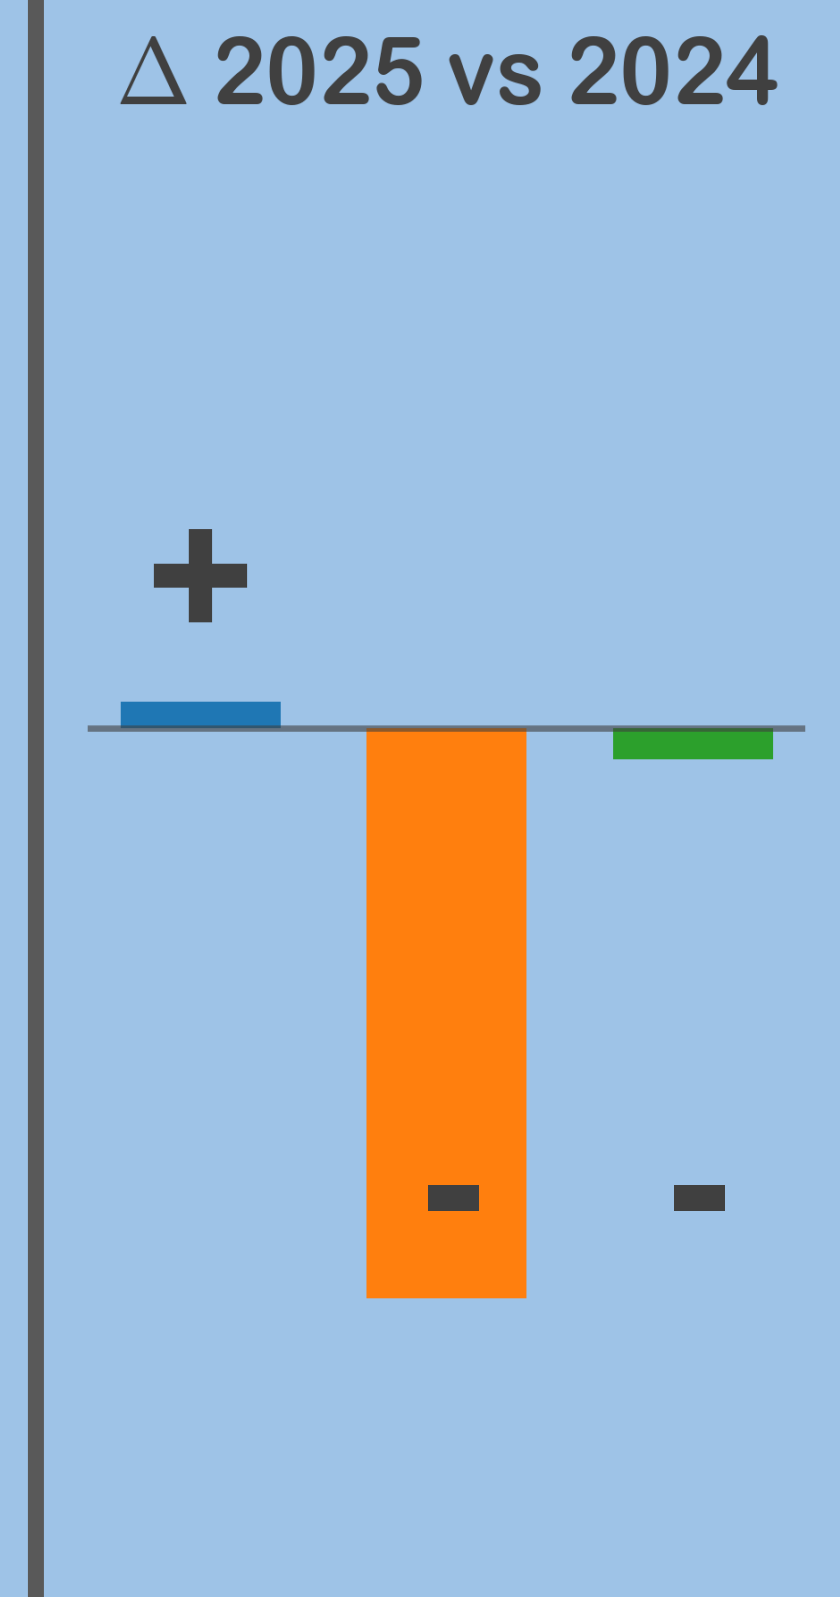

Arkesh Das

Measles Cases Over Time

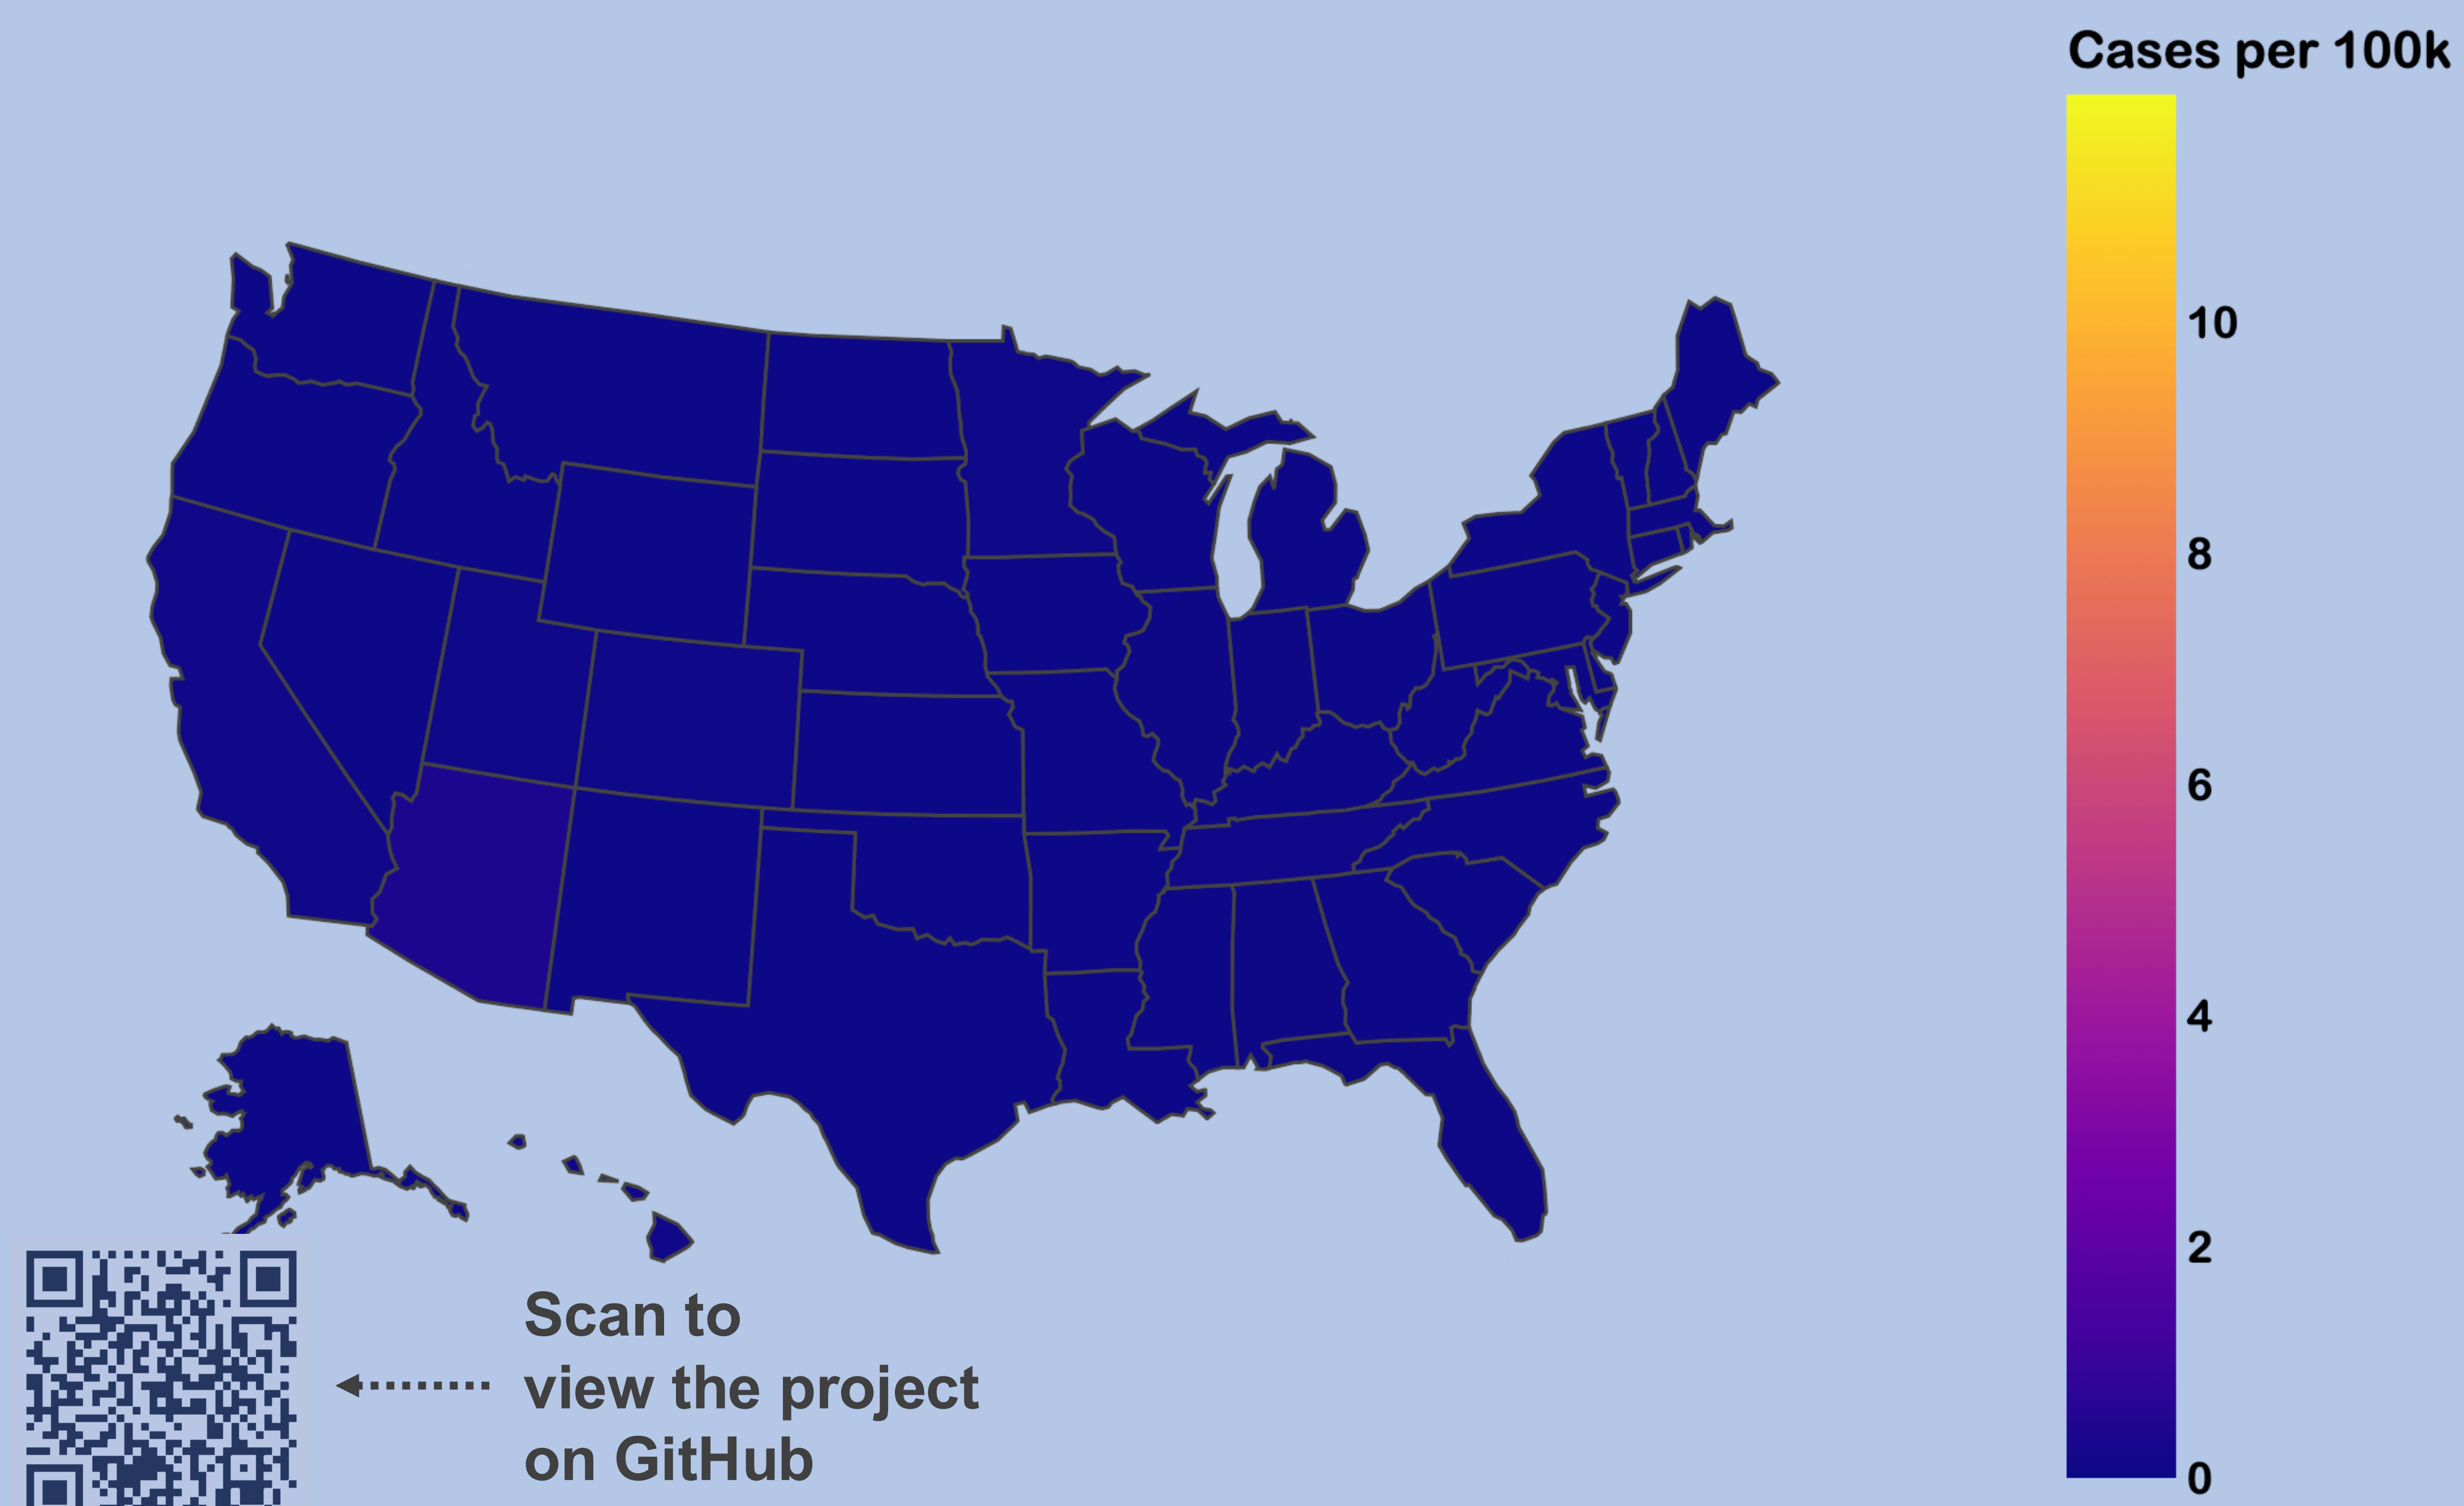

While **measles is declining globally** and across **Europe**, the **United States** is seeing a renewed **increase**.

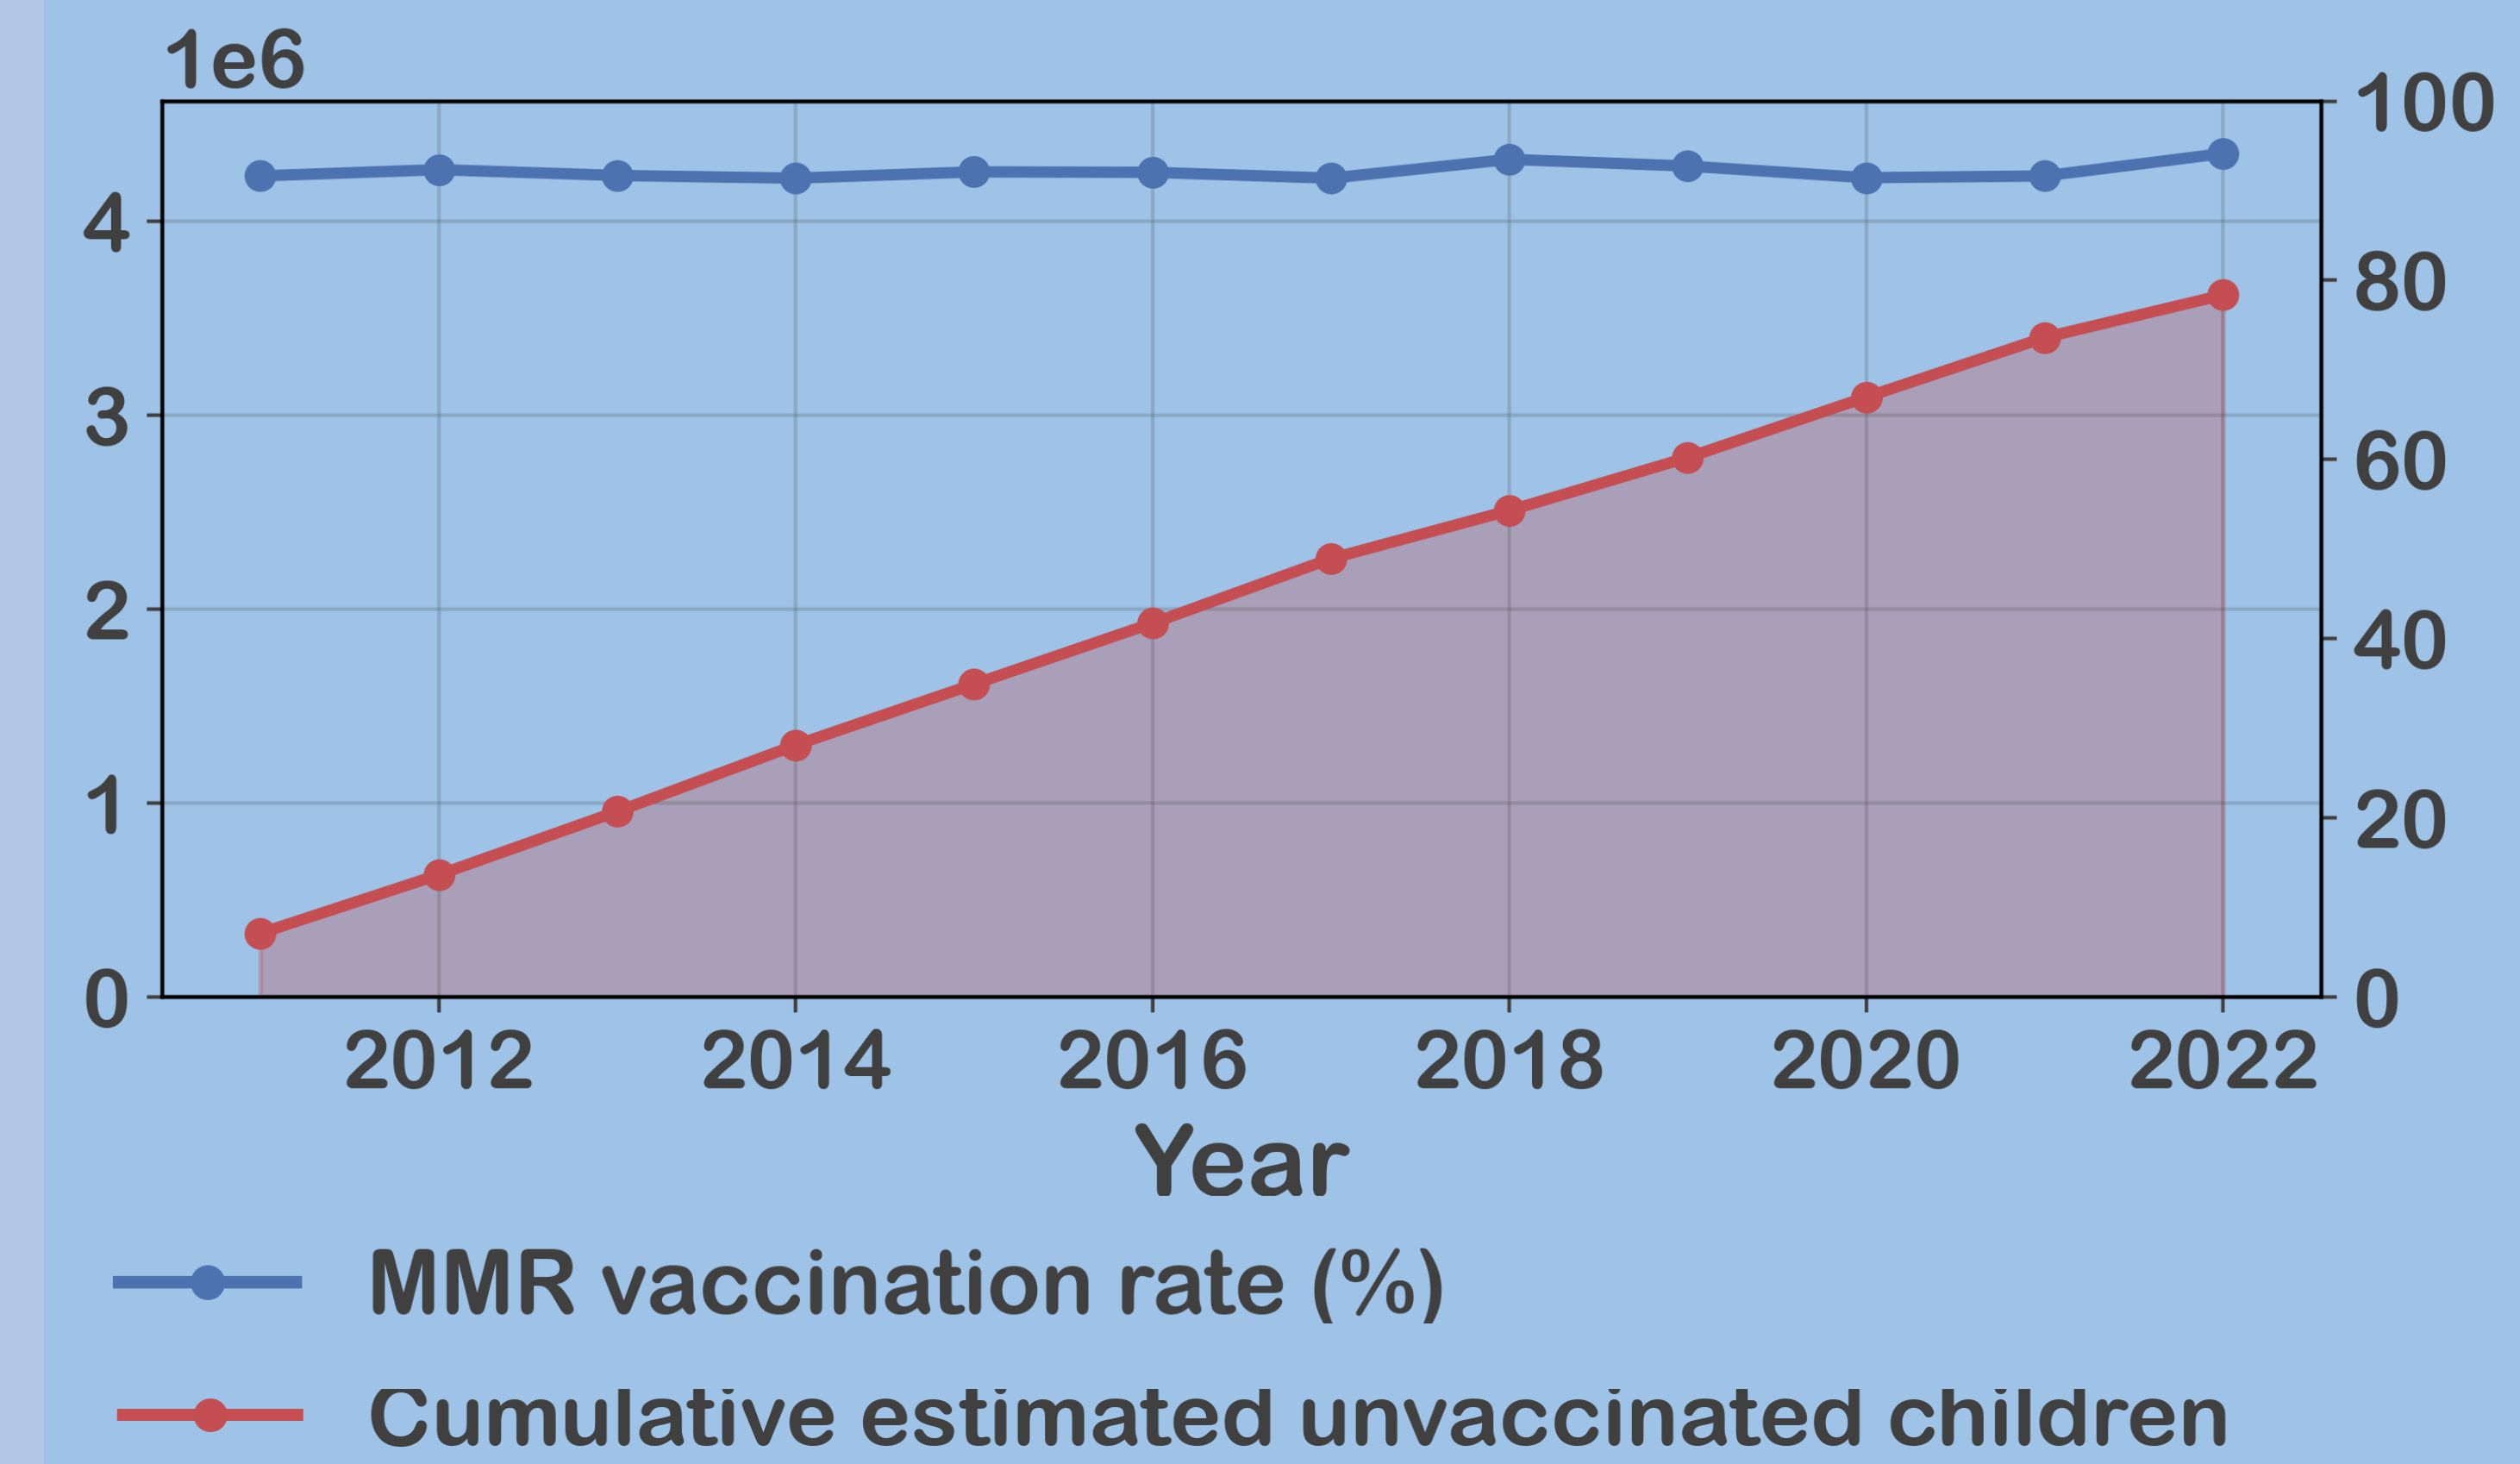

Measles is re-emerging
where vaccination coverage
drops and we need to do
something about it.

Measles Cases per 100,000 People by State, 2016

MMR Vaccination Coverage and Unvaccinated Kids in the US

Even **slight drops** in **vaccination coverage** produce a rapidly **accumulating** pool of **unvaccinated children**.

Higher Exemption Rates Correspond to Greater Outbreak Risk

Where **vaccination** requirements are **weaker**, **measles cases** are **higher**, making a clear case for **standardized national vaccine policies**.
