

Measles is Back: A Data-Driven Look at Vaccination Gaps in the U.S.

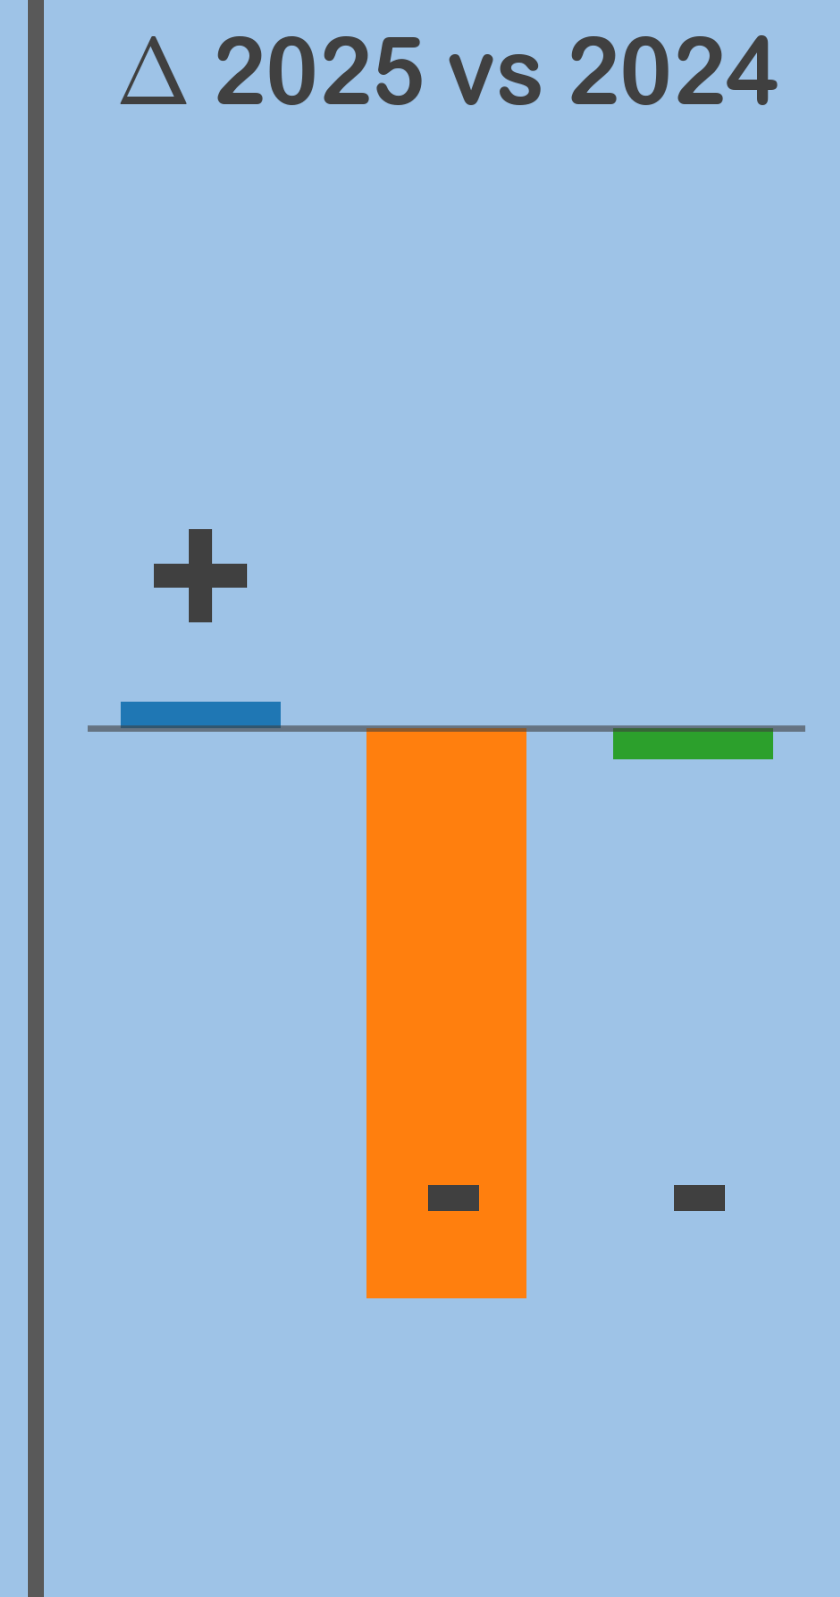

Arkesh Das

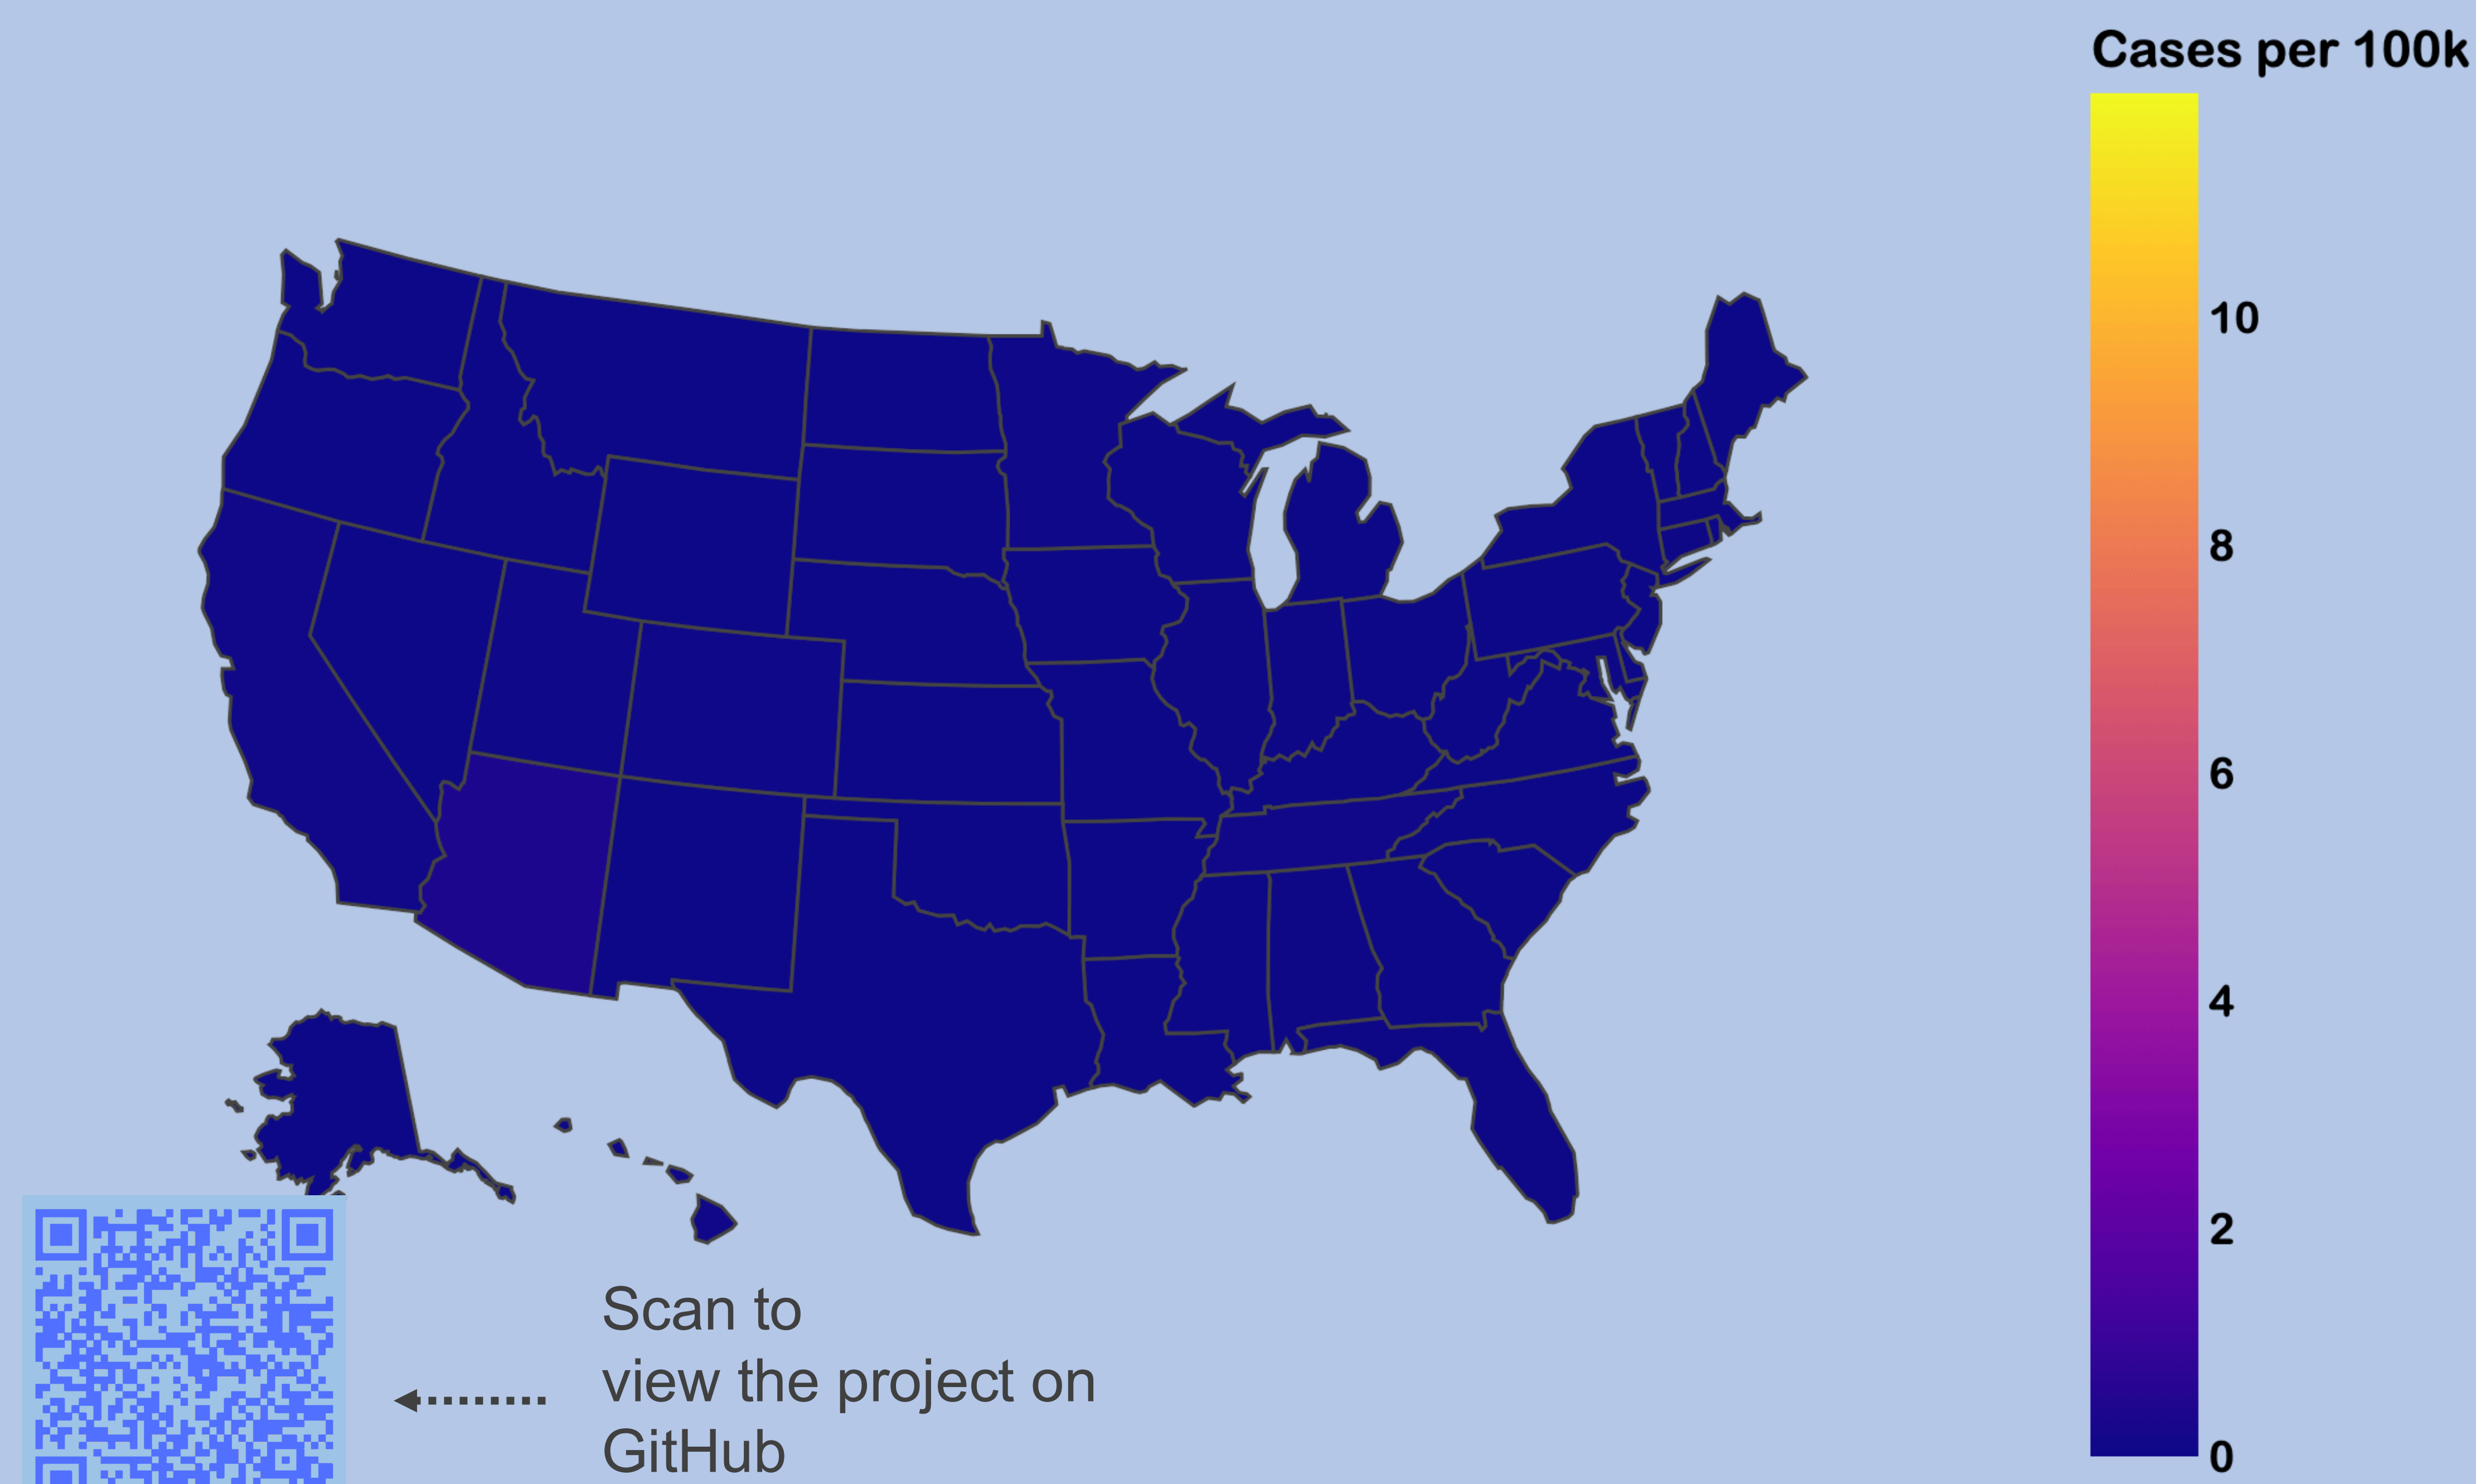

Measles Cases Over Time

While **measles is declining globally** and across **Europe**, the **United States** is seeing a renewed **increase**.

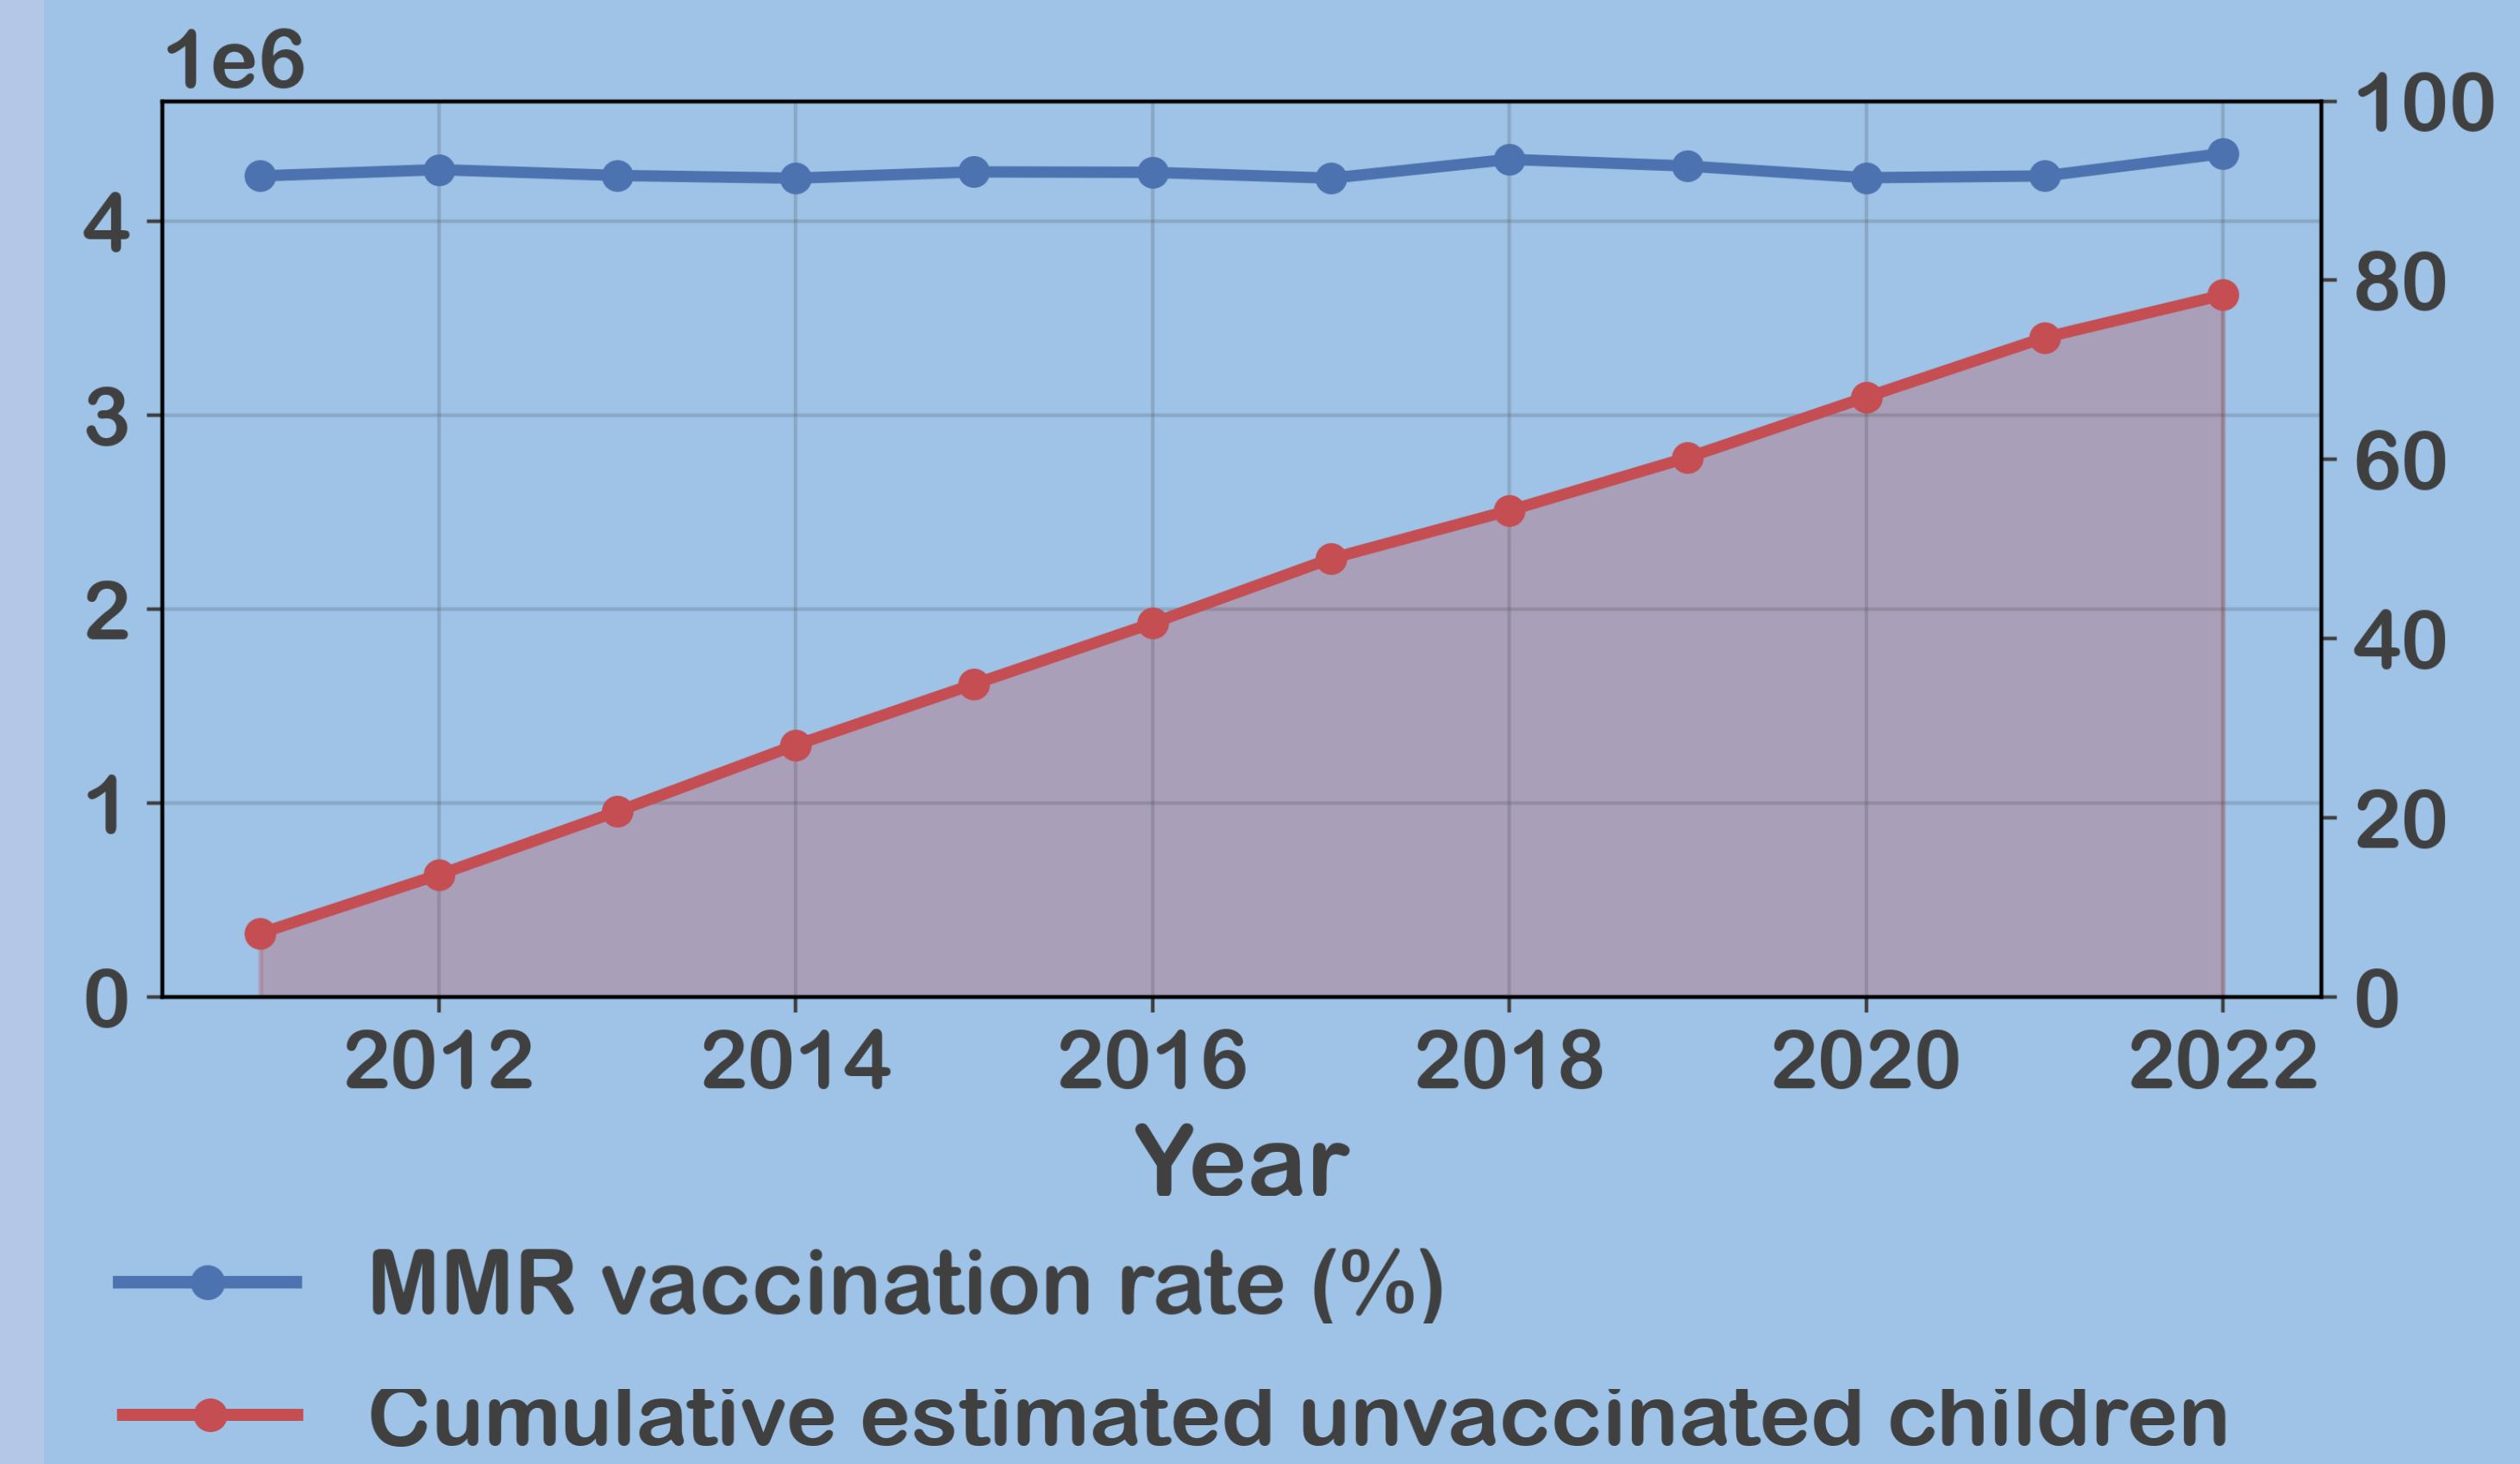

Measles Cases per 100,000 People by State, 2016

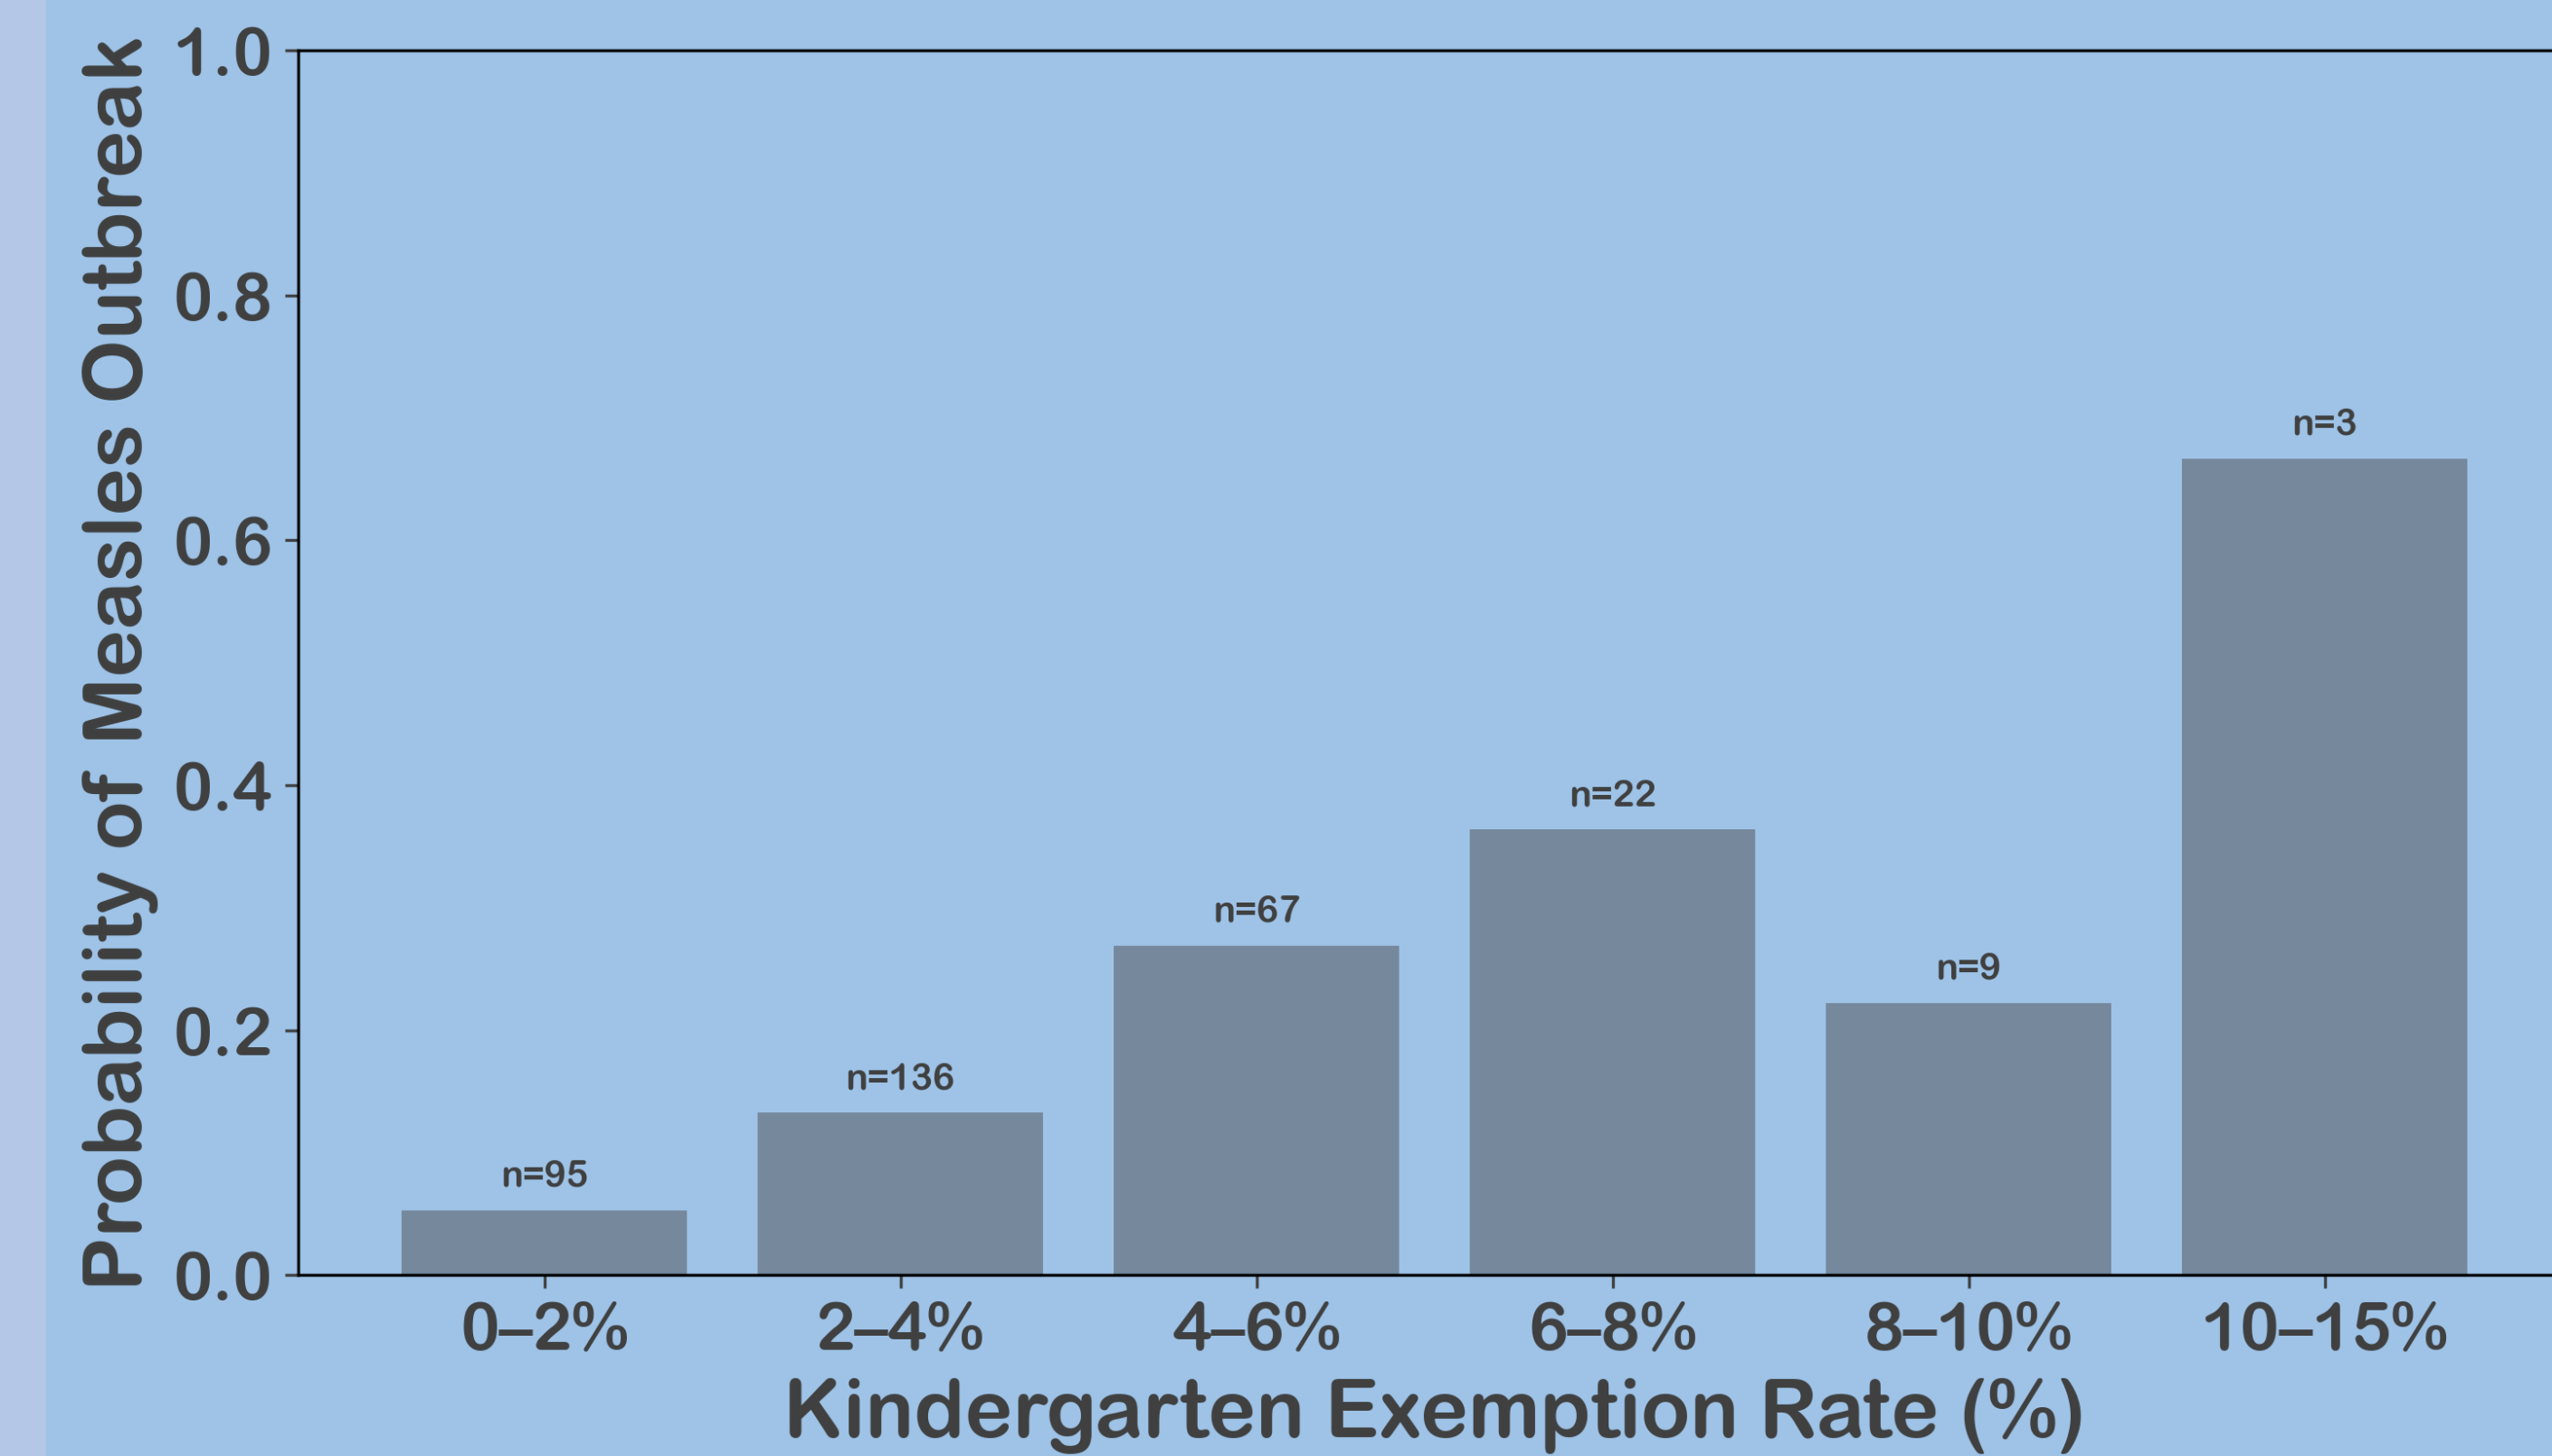

Measles is re-emerging
where vaccination coverage
drops and we need to do
something about it.

MMR Vaccination Coverage and Unvaccinated Kids in the US

Even **slight drops** in **vaccination coverage** produce a rapidly **accumulating** pool of **unvaccinated children**.

Higher Exemption Rates Correspond to Greater Outbreak Risk

Where **vaccination** requirements are **weaker**, **measles cases** are **higher**, making a clear case for **standardized national vaccine policies**.
